CALL FOR PROPOSALS - 2015

IAMP supports projects led by member academies on the basis of merit and following a competitive review process. This call invites applications from IAMP member academies for projects which would run for 12 months, January-December 2016.

For 2016 the IAMP especially encourages applications in our key areas of interest:
- Social determinants of health;
- Urban health;
- One Health;
- Hearing loss;
- Non-communicable diseases (NCDs);
- Antimicrobial resistance;
- Building research capacity;
- Tackling (re-)emerging infectious diseases.

Other topics of relevance to IAMP and listed here: http://www.iamp-online.org/programmes

1. Projects should ideally involve more than one member academies and participation from multiple regions is encouraged.
2. Projects must NOT be for any form of scientific research, nor can proposals be submitted by an individual (research scientists etc).
3. Any partnerships should be through the academy in question, rather than through their research institutes.
4. Projects should produce material and/or recommendations that will be useful to the wider IAMP member community (e.g. statements, toolkits or other material – a workshop report is NOT considered sufficient on its own).

The maximum for funding has been set at $25,000 per proposal – higher amounts will however be considered on a case by case basis.

CRITERIA
Project applications will be assessed by reviewers particularly against the following criteria:
- Are the activities, responsibility, goals, budget and engagement of the wider IAMP community clearly planned and described in the proposal, and are there regular and measurable review stages?
- Are the activities, budget and goals proposed realistic and achievable; Can the project partners demonstrate their ability to deliver?
- Are the activities and goals innovative, relevant and meaningful to IAMP, to its strategic plan and to the needs of its broader science academy membership?

Please complete the attached form and send to IAMP Secretariat by 30 October 2015.
